Background AutoCAD has been the leading commercial CAD software in the U.S. market since 1981, with 90% market share. The main competitors are CATIA, MicroStation, Pro/ENGINEER, and MicroCreation's Inventor. The software is licensed on a subscription basis, and a perpetual license costs between US\$3000 and \$9000 depending on the customer type and the number of users. AutoCAD Classic, previously named AutoCAD 2000 or LC, was introduced in 1995 as a free alternative that runs on Windows 98/Me/XP and Linux. The original goal of AutoCAD, which had been in development since 1974, was to fill the need for a desktop CAD package that was easy to learn, inexpensive, and could run on a wide variety of hardware.² Development of AutoCAD was initially funded by the Autodesk Company in San Rafael, California. The company was funded by venture capitalists including Steve Jobs. The first version was released in late 1982, and was available in limited beta form. In 1995, AutoCAD 2000 was created and renamed to AutoCAD Classic. The company was renamed Autodesk Inc. in 1996. The first version of AutoCAD was named AutoCAD 1. This first version of AutoCAD had several problems. It was developed with little user input. It only ran on an internal graphics controller and had no external hardware support. It also had no network connection and no email support. The first application that did run on external hardware was probably the 1970s version of MicroStation. In 1982, MicroStation was sold to Grinnell Products and renamed Grinnell Graphics. The version that ran on external hardware was sold separately. The first version of AutoCAD that did have network support was in 1986, which enabled online collaborative work. The first version that had email support was in 1988. AutoCAD was licensed by the Autodesk Company to smaller companies, with a version costing \$1000 to \$3000, and these smaller companies would then license it to users. In
