Automation and database plugins AutoCAD can be extended using a variety of automation tools, either plug-ins, or JavaScript. A plug-in can access and modify data in the drawing, print, or database. They are also called database or report plugins. Some are paid products available for AutoCAD LT or Enterprise. Plugins can be classified into: AutoCAD tools Plug-in categories Data-input tools Data-output tools Production tools A plug-in is created as a DLL and normally written in Visual C++ or Visual Basic. There is a limit on the number of plug-ins which can be loaded at any given time. Plug-ins also must be loaded by the host program and have specific permissions to access the drawing and its data. The API (application programming interface) of the AutoCAD code must be designed in a way that the host program can dynamically load and remove the plug-in code. The AutoCAD software also provides a mechanism for running a sequence of commands that can be stored in a file. Data-input and data-output tools These are programs, that allow you to enter or extract data from the drawing. Toolbars A toolbar is a panel or row of icons which allow you to do certain tasks in the program. The most basic type of toolbar is a ribbon toolbar, a row of icons, which you can click on to perform some task. Each toolbar has buttons that control specific drawing objects, and the icons on each toolbar change depending on what the tool is for. For example, the Home toolbar is one row of icons, which controls the basic dialog boxes available to the user in the program, such as the Home tab. Other examples include the Align toolbar, which controls the alignment and scaling of the drawing. The Handlers toolbar, which controls the drawing-related tools, such as the shape-handling tools, and the View palette, which controls the rendering, layout, and editing tools. Toolbars can be assigned to a ribbon or to an insert or command panel. Ribbon, a control panel that contains a row of buttons. It allows you to access and control other features in the software. They are common on AutoCAD-type programs. Command, a control panel which contains a number of icons, usually for different functions in the program. Insert, a small control panel with icons, which can be positioned anywhere in 5b5f913d15
