Periglomerular cells (PICs) are the cells that cover the perivascular connective tissue of glomeruli. The physiological functions of PICs are unknown but studies have suggested that they may participate in the modulation of glomerular functions. Although PICs are known to contain a variety of biochemically different types of proteoglycan in their extracellular matrix, their biosynthesis of these macromolecules have not been studied. In this study, we have investigated the distribution of chondroitin sulphate proteoglycan (CSPG) in the PICs of the rat kidney. Affinity-purified polyclonal anti-chondroitin sulphate antibodies were used in an immunohistochemical analysis of rat kidney sections. PICs were labelled preferentially in the glomerular periphery, especially in the mesangium. This staining pattern was distinct from that of the smooth muscle cell marker, alpha-smooth muscle actin (ASMA), which was co-labelled with CSPG. CSPG-positive PICs were also seen in other glomerular compartments, including the epithelial cells of Bowman's capsule, which also stained with CSPG antibodies. These observations provide the first evidence that PICs can synthesize CSPG. In addition to their mesangial location, we suggest that CSPG in the PICs may be important in the formation of the glomerular basement membrane.Q: Fixed Div when screen width changes I would like to have a fixed width fixed position of a div. When the screen width changes, the div would jump back to the correct width. So, when the screen is 320px the div should jump back to 250px. It is basically the thing you would do when you scroll through a list in a website and your c6a93da74d
