## **MYOB Accounting Plus V13 Portable PORTABLE**

commentaires : i had been using myob for many years. accountedge is a very good product. i tried it out and was very impressed. i have had a couple of issues with the software and accountedge customer support but they were resolved and accountedge is just as good as myob. my accountant was very happy and i was very satisfied. with a core i7 processor and a brilliant 4k display, the dell xps 15 is one of the best business laptops for those who need to multitask and take on multiple work projects at once. this laptop has some of the best hardware you can find in a business laptop, from the core i7 processor to a comfortable keyboard and a brilliant display. with that large display, however, the 15-inch laptop is just too large for most professionals, though, so youre better off with something more portable. commentaires : this is a great product. it's the most user friendly i've ever used. the business templates are nice and it's easy to customize. one of the few software packages that can be customized for the custom accounting needs of a small business. very easy to use and very simple to navigate. i can't believe it's as powerful as it is for the price. definitely my favorite accounting package. commentaires : this is my first time using quickbooks, and have always been using myob because it was easier to use. i changed to accountedge pro because i am a mom, and i had no interest in logging in to my computer each morning. this is the only program i use now. it allows me to manage my accounts, clients, invoices, and even my paypal account. i have used the payroll service and it is excellent. i highly recommend accountedge to anyone!

### **MYOB Accounting Plus V13 Portable**

Somewhat in the same vein, I have been using the same accounting system for my entire consulting career. Thats because a) I am a consultant (and like one :) and b) its made me a fortune over the years. Its been fine for me but I have always been grateful when it is time

---

to retool because I dont particularly enjoy trying to adapt it to new rules and standards.

Its not that its difficult - its just that you basically have to go back in time to the time your system originally wrote (which was the equivalent of 1995/96) and rewrite everything from scratch. I started in the early 80s using Quicken (I couldnt afford any of the better ones back then) and it has been very effective. I use its components (accounting, payables, reporting, check writing, banking transactions, stock quotes and so on) separately but find it easier to work together.

Quicken is not terribly expensive and there are lots of add-ons and components available for it. I rarely need anything beyond the basic stuff. One of the reasons I keep going back to Quicken is its ease of use, I just click and drag (or type in) what I need and its done. Its also available on Windows. There are alternatives for MACs (Numbers, to me it seems a bit complicated, but they do have some very nice features). I use my own accounting package because I need to control the software (i.e. keep the old system running for 18 months for

---

looking up historical information. Otherwise we will depending on the monthly spreadsheet exports for historical information. Although I will be checking out the version of AccountEdge. I see that it has been in development for quite a long time and it looks like its pretty much complete. 5ec8ef588b
