The present invention relates to a throttle valve for an internal combustion engine, and particularly to a throttle valve for an internal combustion engine which is improved in the sealing property, so that the entry of rain water and the like is prevented. In Japanese Utility Model Unexamined Publication No. HEI3-165179, a throttle valve for an internal combustion engine is disclosed. In the throttle valve, there is provided a gate member having a relatively small opening area, and a throttle main body having a relatively large opening area. In the throttle valve, an interval between an inner surface of the throttle main body and an outer surface of the gate member is set to be larger than that between an inner surface of a cylinder head and an outer surface of the gate member. The throttle valve thus constructed includes a cylinder head, and a throttle body in which the throttle main body is inserted. The inner surface of the throttle main body is provided with an orifice extending in a direction in which the outer surface of the gate member extends. In the orifice, a seal member is secured. The inner surface of the cylinder head is formed with a water collecting groove extending in the direction in which the outer surface of the gate member extends. The water collecting groove is provided with a projection which is contacted with a lower surface of the seal member in the closed condition of the throttle valve. With this arrangement, when water splashes against the lower surface of the seal member in the closed condition of the throttle valve, the water is collected by the water collecting groove
